

EVERGREEN

Baby Blue® Colorado Spruce | *Picea pungens glauca* 

Plant description

A seed strain selection from West Montrose farms in Canada, Baby Blue® spruce has remarkable color reliability. The needles are a vibrant blue that intensifies with age, growing evenly around the branches creating a full appearance. While this tree grows slowly, it has good vigor with a uniform and compact habit that requires virtually no shearing to maintain. An excellent blue variety that is more slender than the common Colorado Blue spruce, growing well in open areas.

Height: 35-45'

Spread: 10-20'

Shape: Pyramidal

Exposure: Full Sun

Foliage: Blue

Zone: 3-7
